TEKS (Knowledge and Skills)	Student Expectation	Breakout	Element	Subelement
(2) Number and operations. The student applies mathematical process standards to represent, compare, and order whole numbers and decimals and understand relationships related to place value. The student is expected to:	(B) represent the value of the digit in whole numbers through 1,000,000,000 and decimals to the hundredths using expanded notation and numerals	(ii) represent the value of the digit in whole numbers through 1,000,000,000 using numerals		
(2) Number and operations. The student applies mathematical process standards to represent, compare, and order whole numbers and decimals and understand relationships related to place value. The student is expected to:	(B) represent the value of the digit in whole numbers through 1,000,000,000 and decimals to the hundredths using expanded notation and numerals	(iii) represent the value of the digit in decimals to the hundredths using expanded notation		
(2) Number and operations. The student applies mathematical process standards to represent, compare, and order whole numbers and decimals and understand relationships related to place value. The student is expected to:	(B) represent the value of the digit in whole numbers through 1,000,000,000 and decimals to the hundredths using expanded notation and numerals	(iv) represent the value of the digit in decimals to the hundredths using numerals		
(2) Number and operations. The student applies mathematical process standards to represent, compare, and order whole numbers and decimals and understand relationships related to place value. The student is expected to:	(C) compare and order whole numbers to 1,000,000,000 and represent comparisons using the symbols $>$, $<$, or $=$	(i) compare whole numbers to 1,000,000,000

TEKS (Knowledge and Skills)	Student Expectation	Breakout	Element	Subelement
(3) Number and operations. The student applies mathematical process standards to represent and generate fractions to solve problems. The student is expected to:	(D) compare two fractions with different numerators and different denominators and represent the comparison using the symbols $>$, $=$, or $<$	(ii) compare two fractions with different denominators		
(3) Number and operations. The student applies mathematical process standards to represent and generate fractions to solve problems. The student is expected to:	(D) compare two fractions with different numerators and different denominators and represent the comparison using the symbols $>$, $=$, or $<$	(iii) compare two fractions with different numerators and different denominators		
(3) Number and operations. The student applies mathematical process standards to represent and generate fractions to solve problems. The student is expected to:	(D) compare two fractions with different numerators and different denominators and represent the comparison using the symbols $>$, $=$, or $<$	(iv) represent the comparison using the symbols $>$, $=$, or $<$		
(3) Number and operations. The student applies mathematical process standards to represent and generate fractions to solve problems. The student is expected to:	(E) represent and solve addition and subtraction of fractions with equal denominators using objects and pictorial models that build to the number line and properties of operations	(i) represent addition of fractions with equal denominators using objects		
(3) Number and operations. The student applies mathematical process standards to represent and generate fractions to solve problems. The student is expected to:	(E) represent and solve addition and subtraction of fractions with equal denominators using objects and pictorial models that build to the number line and properties of operations	(ii) represent addition of fractions with equal denominators using pictorial models that build to the number line

TEKS (Knowledge and Skills)	Student Expectation	Breakout	Element	Subelement
(3) Number and operations. The student applies mathematical process standards to represent and generate fractions to solve problems. The student is expected to:	(E) represent and solve addition and subtraction of fractions with equal denominators using objects and pictorial models that build to the number line and properties of operations	(viii) solve addition of fractions with equal denominators using pictorial models that build to the number line		
(3) Number and operations. The student applies mathematical process standards to represent and generate fractions to solve problems. The student is expected to:	(E) represent and solve addition and subtraction of fractions with equal denominators using objects and pictorial models that build to the number line and properties of operations	(ix) solve addition of fractions with equal denominators using properties of operations		
(3) Number and operations. The student applies mathematical process standards to represent and generate fractions to solve problems. The student is expected to:	(E) represent and solve addition and subtraction of fractions with equal denominators using objects and pictorial models that build to the number line and properties of operations	(x) solve subtraction of fractions with equal denominators using objects		
(3) Number and operations. The student applies mathematical process standards to represent and generate fractions to solve problems. The student is expected to:	(E) represent and solve addition and subtraction of fractions with equal denominators using objects and pictorial models that build to the number line and properties of operations	(xi) solve subtraction of fractions with equal denominators using pictorial models that build to the number line		
(3) Number and operations. The student applies mathematical process standards to represent and generate fractions to solve problems. The student is expected to:	(E) represent and solve addition and subtraction of fractions with equal denominators using objects and pictorial models that build to the number line and properties of operations	(xii) solve subtraction of fractions with equal denominators using properties of operations		

Subject	Chapter 111. Mathematics			
Course Title	§111.6. Math, Grade 4, Beginning with School Year 2014-2015			
TEKS (Knowledge and Skills)	Student Expectation	Breakout	Element	Subelement
(3) Number and operations. The student applies mathematical process standards to represent and generate fractions to solve problems. The student is expected to:	(F) evaluate the reasonableness of sums and differences of fractions using benchmark fractions 0, $\frac{1}{4}$, $\frac{1}{2}$, $\frac{3}{4}$, and 1, referring to the same whole	(i) evaluate the reasonableness of sums of fractions using benchmark fractions 0, $\frac{1}{4}$, $\frac{1}{2}$, $\frac{3}{4}$, and 1, referring to the same whole		
(3) Number and operations. The student applies mathematical process standards to represent and generate fractions to solve problems. The student is expected to:	(F) evaluate the reasonableness of sums and differences of fractions using benchmark fractions 0, $\frac{1}{4}$, $\frac{1}{2}$, $\frac{3}{4}$, and 1, referring to the same whole	(ii) evaluate the reasonableness of differences of fractions using benchmark fractions 0, $\frac{1}{4}$, $\frac{1}{2}$, $\frac{3}{4}$, and 1, referring to the same whole		
(3) Number and operations. The student applies mathematical process standards to represent and generate fractions to solve problems. The student is expected to:	(G) represent fractions and decimals to the tenths or hundredths as distances from zero on a number line	(i) represent fractions to the tenths or hundredths as distances from zero on a number line		
(3) Number and operations. The student applies mathematical process standards to represent and generate fractions to solve problems. The student is expected to:	(G) represent fractions and decimals to the tenths or hundredths as distances from zero on a number line	(ii) represent decimals to the tenths or hundredths as distances from zero on a number line

Course Title	§111.6. Math, Grade 4, Beginning with School Year 2014-2015			
TEKS (Knowledge and Skills)	Student Expectation	Breakout	Element	Subelement
(4) Number and operations. The student applies mathematical process standards to develop and use strategies and methods for whole number computations and decimal sums and differences in order to solve problems with efficiency and accuracy. The student is expected to:	(A) add and subtract whole numbers and decimals to the hundredths place using the standard algorithm			

Subject	Chapter 111. Mathematics			
Course Title	§111.6. Math, Grade 4, Beginning with School Year 2014-2015			
TEKS (Knowledge and Skills)	Student Expectation	Breakout	Element	Subelement
(4) Number and operations. The student applies mathematical process standards to develop and use strategies and methods for whole number computations and decimal sums and differences in order to solve problems with efficiency and accuracy. The student is expected to:	(A) add and subtract whole numbers and decimals to the hundredths place using the standard algorithm	(iv) subtract whole numbers using the standard algorithm		
(4) Number and operations. The student applies mathematical process standards to develop and use strategies and methods for whole number computations and decimal sums and differences in order to solve problems with efficiency and accuracy. The student is expected to:	(A) add and subtract whole numbers and decimals to the hundredths place using the standard algorithm	(v) subtract decimals to the hundredths place using the standard algorithm		
(4) Number and operations. The student applies mathematical process standards to develop and use strategies and methods for whole number computations and decimal sums and differences in order to solve problems with efficiency and accuracy. The student is expected to:	(A) add and subtract whole numbers and decimals to the hundredths place using the standard algorithm	(vi) subtract whole numbers and decimals to the hundredths place using the standard algorithm

Course Title	§111.6. Math, Grade 4, Beginning with School Year 2014-2015			
TEKS (Knowledge and Skills)	Student Expectation	Breakout	Element	Subelement
(4) Number and operations. The student applies mathematical process standards to develop and use strategies and methods for whole number computations and decimal sums and differences in order to solve problems with efficiency and accuracy. The student is expected to:	(D) use strategies and algorithms, including the standard algorithm, to multiply up to a four-digit number by a one-digit number and to multiply a two-digit number by a two-digit number. Strategies may include mental math, partial products, and the commutative, associative, and distributive properties	(iv) use algorithms, including the standard algorithm, to multiply a two-digit number by a two-digit number		
(4) Number and operations. The student applies mathematical process standards to develop and use strategies and methods for whole number computations and decimal sums and differences in order to solve problems with efficiency and accuracy. The student is expected to:	(E) represent the quotient of up to a four-digit whole number divided by a one-digit whole number using arrays, area models, or equations			
(4) Number and operations. The student applies mathematical process standards to develop and use strategies and methods for whole number computations and decimal sums and differences in order to solve problems with efficiency and accuracy. The student is expected to:	(F) use strategies and algorithms, including the standard algorithm, to divide up to a four-digit dividend by a one-digit divisor	(i) use strategies to divide up to a four-digit dividend by a one-digit divisor		

Subject	Chapter 111. Mathematics

TEKS (Knowledge and Skills)	Student Expectation	Breakout	Element	Subelement
(5) Algebraic reasoning. The student applies mathematical process standards to develop concepts of expressions and equations. The student is expected to:	(A) represent multi-step problems involving the four operations with whole numbers using strip diagrams and equations with a letter standing for the unknown quantity	(ii) represent multi-step problems involving the four operations with whole numbers using equations with a letter standing for the unknown quantity		
(5) Algebraic reasoning. The student applies mathematical process standards to develop concepts of expressions and equations. The student is expected to:	(B) represent problems using an input-output table and numerical expressions to generate a number pattern that follows a given rule representing the relationship of the values in the resulting sequence and their position in the sequence	(i) represent problems using an input-output table to generate a number pattern that follows a given rule representing the relationship of the values in the resulting sequence and their position in the sequence		
(5) Algebraic reasoning. The student applies mathematical process standards to develop concepts of expressions and equations. The student is expected to:	(B) represent problems using an input-output table and numerical expressions to generate a number pattern that follows a given rule representing the relationship of the values in the resulting sequence and their position in the sequence	(ii) represent problems using numerical expressions to generate a number pattern that follows a given rule representing the relationship of the values in the resulting sequence and their position in the sequence		
(5) Algebraic reasoning. The student applies mathematical process standards to develop concepts of expressions and equations. The student is expected to:	(C) use models to determine the formulas for the perimeter of a rectangle ($l + w + l + w$ or $2l + 2w$), including the special form for perimeter of a square ($4s$) and the area of a rectangle ($l \times w$)	(i) use models to determine the formulas for the perimeter of a rectangle ($l + w + l + w$ or $2l + 2w$), including the special form for perimeter of a square ($4s$)		
(5) Algebraic reasoning. The student applies mathematical process standards to develop concepts of expressions and equations. The student is expected to:	(C) use models to determine the formulas for the perimeter of a rectangle ($l + w + l + w$ or $2l + 2w$), including the special form for perimeter of a square ($4s$) and the area of a rectangle ($l \times w$)	(ii) use models to determine the formula for the area of a rectangle ($l \times w$)

(6) Geometry and measurement. The student applies mathematical process standards to analyze geometric attributes in order to develop generalizations about their properties. The student is expected to:	(A) identify points, lines, line segments, rays, angles, and perpendicular and parallel lines	(vii) identify parallel lines		
(6) Geometry and measurement. The student applies mathematical process standards to analyze geometric attributes in order to develop generalizations about their properties. The student is expected to:	(B) identify and draw one or more lines of symmetry, if they exist, for a two-dimensional figure	(i) identify one or more lines of symmetry, if they exist, for a two-dimensional figure		
(6) Geometry and measurement. The student applies mathematical process standards to analyze geometric attributes in order to develop generalizations about their properties. The student is expected to:	(B) identify and draw one or more lines of symmetry, if they exist, for a two-dimensional figure	(ii) draw one or more lines of symmetry, if they exist, for a two-dimensional figure		
(6) Geometry and measurement. The student applies mathematical process standards to analyze geometric attributes in order to develop generalizations about their properties. The student is expected to:	(C) apply knowledge of right angles to identify acute, right, and obtuse triangles	(i) apply knowledge of right angles to identify acute triangles

(7) Geometry and measurement. The student applies mathematical process standards to solve problems involving angles less than or equal to 180 degrees. The student is expected to:	(B) illustrate degrees as the units used to measure an angle, where $\frac{1}{360}$ of any circle is one degree and an angle that "cuts" $\frac{n}{360}$ out of any circle whose center is at the angle's vertex has a measure of n degrees. Angle measures are limited to whole numbers	(i) illustrate degrees as the units used to measure an angle, where $\frac{1}{360}$ of any circle is one degree		
(7) Geometry and measurement. The student applies mathematical process standards to solve problems involving angles less than or equal to 180 degrees. The student is expected to:	(B) illustrate degrees as the units used to measure an angle, where $\frac{1}{360}$ of any circle is one degree and an angle that "cuts" $\frac{n}{360}$ out of any circle whose center is at the angle's vertex has a measure of n degrees. Angle measures are limited to whole numbers	(ii) illustrate degrees as the units used to measure an angle, where an angle that "cuts" $\frac{n}{360}$ out of any circle whose center is at the angle's vertex has a measure of n degrees		
(7) Geometry and measurement. The student applies mathematical process standards to solve problems involving angles less than or equal to 180 degrees. The student is expected to:	(C) determine the approximate measures of angles in degrees to the nearest whole number using a protractor			
(7) Geometry and measurement. The student applies mathematical process standards to solve problems involving angles less than or equal to 180 degrees. The student is expected to:	(D) draw an angle with a given measure			
(7) Geometry and measurement. The student applies mathematical process standards to solve problems involving angles less than or equal to 180 degrees. The student is expected to:	(E) determine the measure of an unknown angle formed by two non-overlapping adjacent angles given one or both angle measures

(8) Geometry and measurement. The student applies mathematical process standards to select appropriate customary and metric units, strategies, and tools to solve problems involving measurement. The student is expected to:	(A) identify relative sizes of measurement units within the customary and metric systems	(i) identify relative sizes of measurement units within the customary systems		
(8) Geometry and measurement. The student applies mathematical process standards to select appropriate customary and metric units, strategies, and tools to solve problems involving measurement. The student is expected to:	(A) identify relative sizes of measurement units within the customary and metric systems	(ii) identify relative sizes of measurement units within the metric systems		
(8) Geometry and measurement. The student applies mathematical process standards to select appropriate customary and metric units, strategies, and tools to solve problems involving measurement. The student is expected to:	(B) convert measurements within the same measurement system, customary or metric, from a smaller unit into a larger unit or a larger unit into a smaller unit when given other equivalent measures represented in a table			
(8) Geometry and measurement. The student applies mathematical process standards to select appropriate customary and metric units, strategies, and tools to solve problems involving measurement. The student is expected to:

(8) Geometry and measurement. The student applies mathematical process standards to select appropriate customary and metric units, strategies, and tools to solve problems involving measurement. The student is expected to:	(C) solve problems that deal with measurements of length, intervals of time, liquid volumes, mass, and money using addition, subtraction, multiplication, or division as appropriate	(ii) solve problems that deal with intervals of time using addition, subtraction, multiplication, or division as appropriate		
(8) Geometry and measurement. The student applies mathematical process standards to select appropriate customary and metric units, strategies, and tools to solve problems involving measurement. The student is expected to:	(C) solve problems that deal with measurements of length, intervals of time, liquid volumes, mass, and money using addition, subtraction, multiplication, or division as appropriate	(iii) solve problems that deal with liquid volumes using addition, subtraction, multiplication, or division as appropriate		
(8) Geometry and measurement. The student applies mathematical process standards to select appropriate customary and metric units, strategies, and tools to solve problems involving measurement. The student is expected to:	(C) solve problems that deal with measurements of length, intervals of time, liquid volumes, mass, and money using addition, subtraction, multiplication, or division as appropriate	(iv) solve problems that deal with mass using addition, subtraction, multiplication, or division as appropriate		
(8) Geometry and measurement. The student applies mathematical process standards to select appropriate customary and metric units, strategies, and tools to solve problems involving measurement. The student is expected to:	(C) solve problems that deal with measurements of length, intervals of time, liquid volumes, mass, and money using addition, subtraction, multiplication, or division as appropriate	(v) solve problems that deal with money using addition, subtraction, multiplication, or division as appropriate

(9) Data analysis. The student applies mathematical process standards to solve problems by collecting, organizing, displaying, and interpreting data. The student is expected to:	(A) represent data on a frequency table, dot plot, or stem-and-leaf plot marked with whole numbers and fractions	(i) represent data on a frequency table, dot plot, or stem-and-leaf plot marked with whole numbers		
(9) Data analysis. The student applies mathematical process standards to solve problems by collecting, organizing, displaying, and interpreting data. The student is expected to:	(A) represent data on a frequency table, dot plot, or stem-and-leaf plot marked with whole numbers and fractions	(ii) represent data on a frequency table, dot plot, or stem-and-leaf plot marked with fractions		
(9) Data analysis. The student applies mathematical process standards to solve problems by collecting, organizing, displaying, and interpreting data. The student is expected to:	(A) represent data on a frequency table, dot plot, or stem-and-leaf plot marked with whole numbers and fractions	(iii) represent data on a frequency table, dot plot, or stem-and-leaf plot marked with whole numbers and fractions		
(9) Data analysis. The student applies mathematical process standards to solve problems by collecting, organizing, displaying, and interpreting data. The student is expected to:	(B) solve one- and two-step problems using data in whole number, decimal, and fraction form in a frequency table, dot plot, or stem-and-leaf plot	(i) solve one-step problems using data in whole number form in a frequency table, dot plot, or stem-and-leaf plot		
(9) Data analysis. The student applies mathematical process standards to solve problems by collecting, organizing, displaying, and interpreting data. The student is expected to:	(B) solve one- and two-step problems using data in whole number, decimal, and fraction form in a frequency table, dot plot, or stem-and-leaf plot	(ii) solve one-step problems using data in decimal form in a frequency table, dot plot, or stem-and-leaf plot

(10) Personal financial literacy. The student applies mathematical process standards to manage one's financial resources effectively for lifetime financial security. The student is expected to:	(B) calculate profit in a given situation			
(10) Personal financial literacy. The student applies mathematical process standards to manage one's financial resources effectively for lifetime financial security. The student is expected to:	(C) compare the advantages and disadvantages of various savings options	(i) compare the advantages of various savings options		
(10) Personal financial literacy. The student applies mathematical process standards to manage one's financial resources effectively for lifetime financial security. The student is expected to:	(C) compare the advantages and disadvantages of various savings options	(ii) compare the disadvantages of various savings options		
(10) Personal financial literacy. The student applies mathematical process standards to manage one's financial resources effectively for lifetime financial security. The student is expected to:	(D) describe how to allocate a weekly allowance among spending; saving, including for college; and sharing
